

Connecting to WIMM Ubuntu Desktop Working Remotely

If it becomes necessary that you work from home as a result of COVID-19 isolation requirements there are a number of options open to you. In all cases you must ensure that the machines connecting to Institute systems are patched with the latest security updates and are running anti-virus programs that are updating with the latest virus/malware information.

IP addresses in the screenshots in this document have been deliberately obscured.

It is not possible to allow remote connections to multi-user systems within the Institute. Remote access is only possible from a single remote connection to a single user account on an Institute desktop.

1. If you have a laptop or desktop at home you must use the University of Oxford VPN client when accessing restricted University data and services from your home WiFi. Details of the University VPN can be found at:

<https://help.it.ox.ac.uk/network/vpn/index>

2. If you are transferring confidential or sensitive data from WIMM systems via USB drives or laptops then the data should be encrypted.
3. If you wish to access your WIMM server account home and shared folders remotely you will need to use the VPN client in order to log into the WIMM servers via the Windows MicroFocus client or the Macintosh native client.
4. If you want to access your WIMM home folder (not lab shared folders) remotely it is also possible to do this via a web interface, see:

<https://netstorage.imsu.ox.ac.uk/>

Connecting remotely to your Institute Desktop System

If you wish to connect to your desktop computer in the WIMM then please email:

help@imm.ox.ac.uk

to request an account on the WIMM ssh gateway (this will have the same username and password as your University SSO account).

The instructions below describe how to use your WIMM ssh gateway account to make a connection to your Institute desktop system. Instructions are given for Windows, Macintosh and Ubuntu platforms.

It is essential that you know the IP address of the Institute computer you wish to connect to remotely. It is also essential you know the username and password to log on to your Institute desktop, your SSO (Single Sign On) username and password and your Remote access password.

Follow these instructions to find out the IP address of your Ethernet (wired) connection on your Institute desktops:

Ubuntu desktop:

<https://help.ubuntu.com/stable/ubuntu-help/net-findip.html.en>

Windows desktop:

<https://support.microsoft.com/en-us/help/4026518/windows-10-find-your-ip-address>

Macintosh desktop:

<https://www.wikihow.com/Find-Your-IP-Address-on-a-Mac>

To connect from remote (home) Windows PC or Macintosh to an Institute Ubuntu Desktop

On the Institute Ubuntu Desktop

Note the Ethernet IP address of the Institute Ubuntu system.

Open a terminal window and type the following commands:

```
sudo apt-get update
```

```
sudo apt-get upgrade
```

```
sudo apt install openssh-server
```

Check ssh is enabled (active):

```
sudo systemctl status ssh
```

```
~$ sudo systemctl status ssh
● ssh.service - OpenBSD Secure Shell server
   Loaded: loaded (/lib/systemd/system/ssh.service; enabled; vendor preset: ena
   Active: active (running) since Tue 2020-03-10 05:03:34 PDT; 2h 7min ago
     Main PID: 762 (sshd)
        Tasks: 1 (limit: 4621)
       CGroup: /system.slice/ssh.service
             └─762 /usr/sbin/sshd -D

Mar 10 05:03:35 ubuntu systemd[1]: Reloading OpenBSD Secure Shell server.
Mar 10 05:03:35 ubuntu sshd[762]: Received SIGHUP; restarting.
Mar 10 05:03:35 ubuntu sshd[762]: Server listening on 0.0.0.0 port 22.
Mar 10 05:03:35 ubuntu sshd[762]: Server listening on :: port 22.
Mar 10 05:03:35 ubuntu systemd[1]: Reloaded OpenBSD Secure Shell server.
Mar 10 05:03:35 ubuntu systemd[1]: Reloading OpenBSD Secure Shell server.
Mar 10 05:03:35 ubuntu sshd[762]: Received SIGHUP; restarting.

lines 1-18/18 (END)
```

Install fail2ban:

```
sudo apt install fail2ban
```

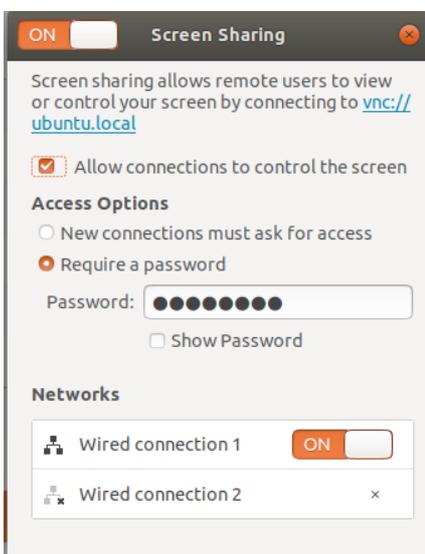

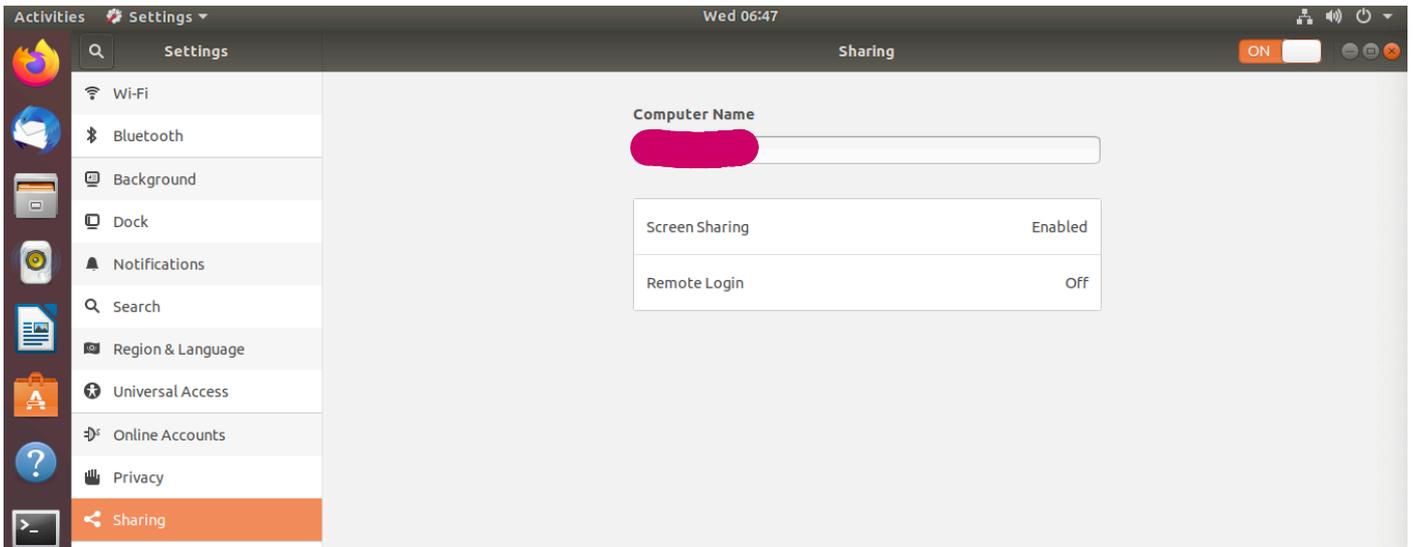

Check fail2ban is running:

```
/etc/init.d/fail2ban status
```

```
~$ /etc/init.d/fail2ban status
● fail2ban.service - Fail2Ban Service
   Loaded: loaded (/lib/systemd/system/fail2ban.service; enabled; vendor preset
: enabled)
   Active: active (running) since Tue 2020-03-10 05:03:34 PDT; 2h 20min ago
     Docs: man:fail2ban(1)
     Main PID: 753 (fail2ban-server)
        Tasks: 3 (limit: 4621)
       CGroup: /system.slice/fail2ban.service
             └─753 /usr/bin/python3 /usr/bin/fail2ban-server -xf start

Mar 10 05:03:34 ubuntu systemd[1]: Starting Fail2Ban Service...
Mar 10 05:03:34 ubuntu systemd[1]: Started Fail2Ban Service.
Mar 10 05:03:35 ubuntu fail2ban-server[753]: Server ready
```

Turn on Desktop sharing from the System Settings – set password for remote authentication

Enter command as a standard user **do not** sudo

```
/usr/bin/gsettings set org.gnome.Vino require-encryption false
```

On Remote (home) Windows Desktop

On your home Wifi you will need to use Oxford University VPN connection:

<https://help.it.ox.ac.uk/network/vpn/index>

Download and install VNCViewer:

<https://www.realvnc.com/en/connect/download/viewer/>

In **administrator** command prompt enter:

```
ssh SSO_username@sshgw.imm.ox.ac.uk -L 5901:IP_Address_of_Ubuntu_Desktop:5900
```

Prompted for SSO password (the IP address has been obscured)

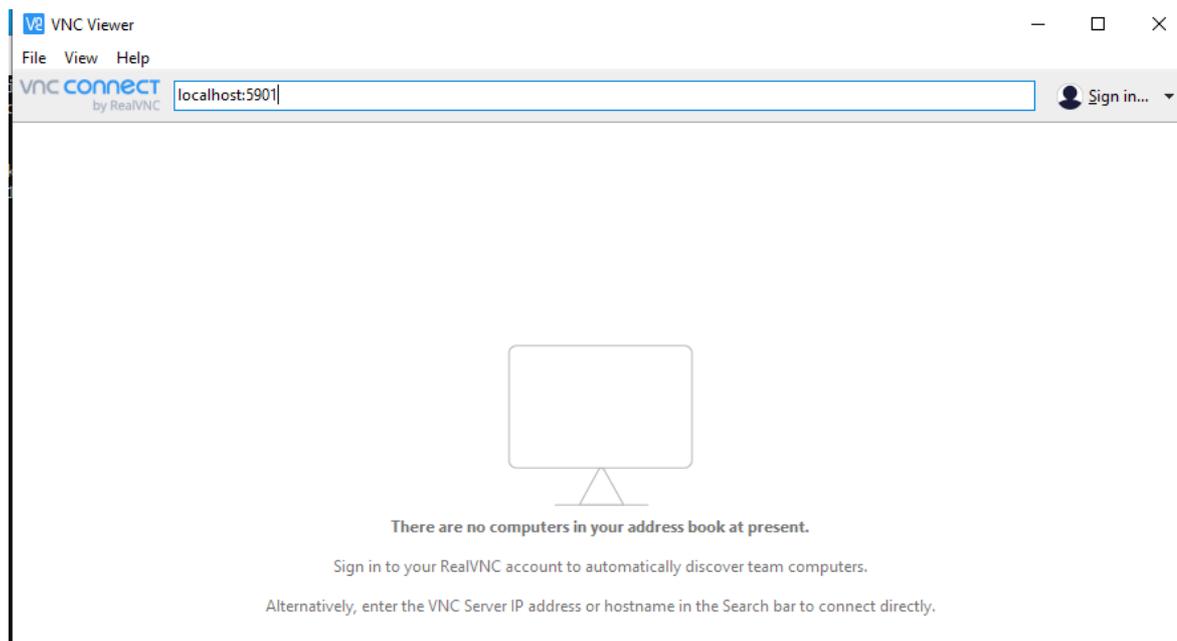

```
C:\Windows\system32>ssh lynne@sshgw.imm.ox.ac.uk -L 5901:[REDACTED]:5900
lynne@sshgw.imm.ox.ac.uk's password:
Last login: Tue Feb 18 11:19:54 2020 from client0151.vpn.ox.ac.uk
[lynne@sshgw ~]$
```

You could put this command in a batch file.

Open VNCViewer

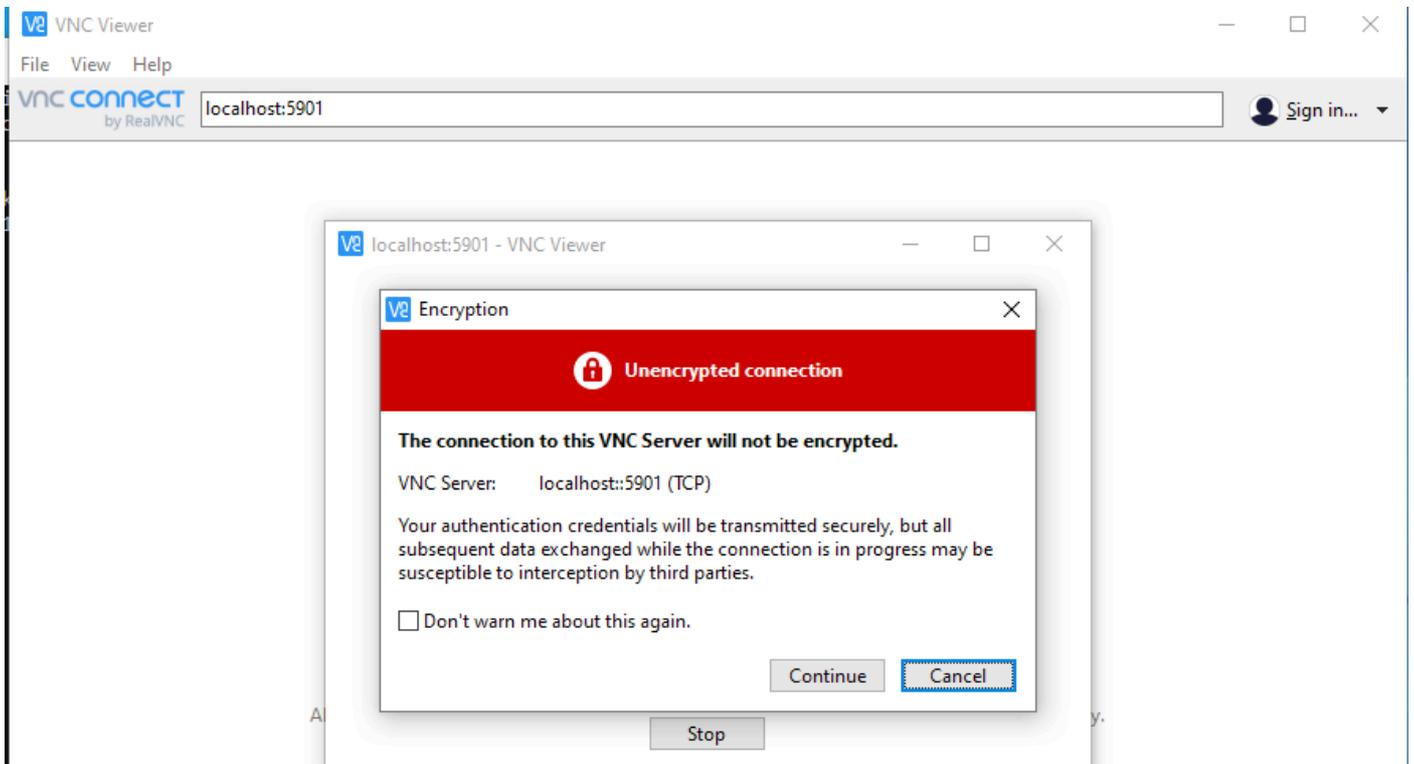

Enter

localhost:5901

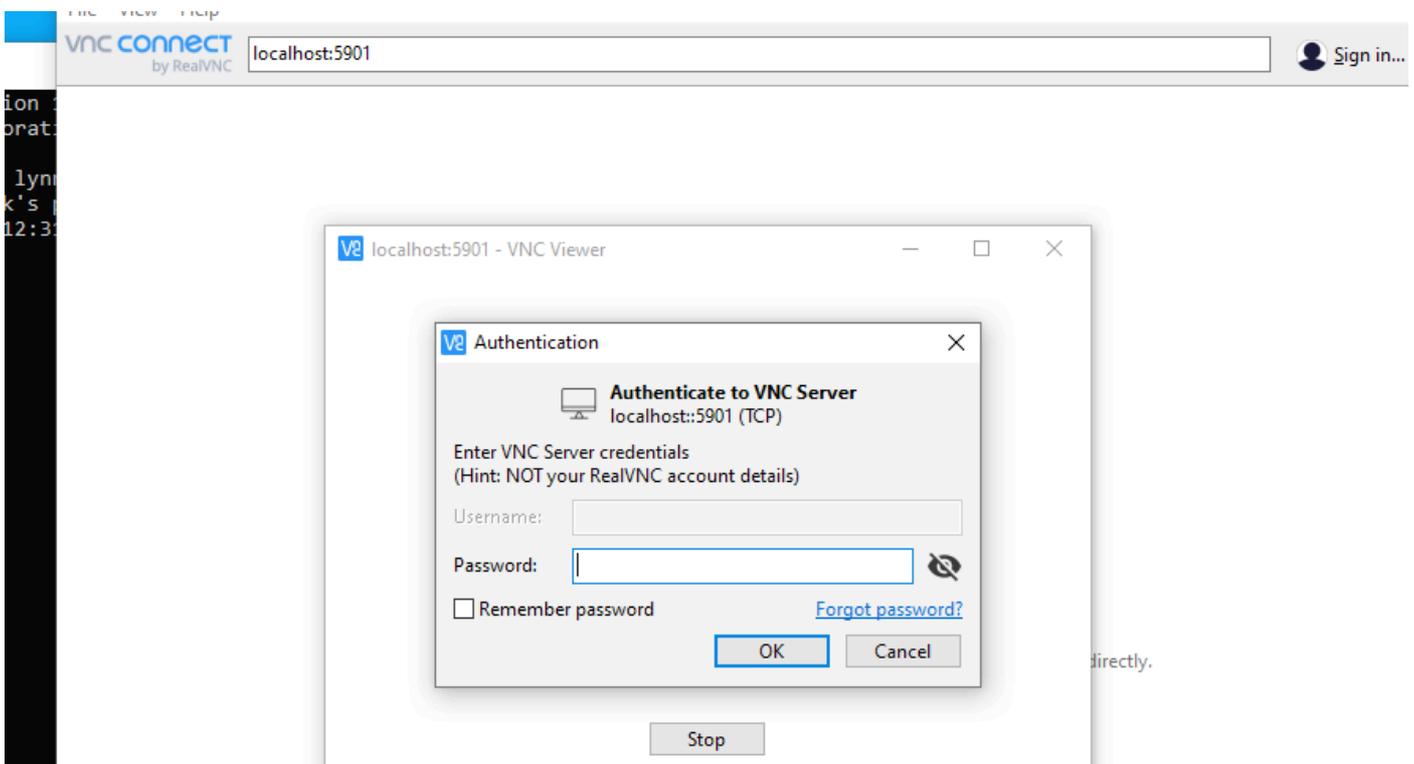

Press Return

You may see the following prompt:

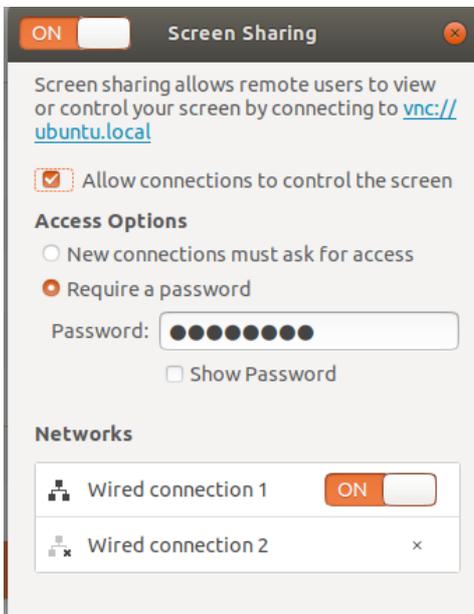

Tick **Don't warn me about this again** and click **Continue**

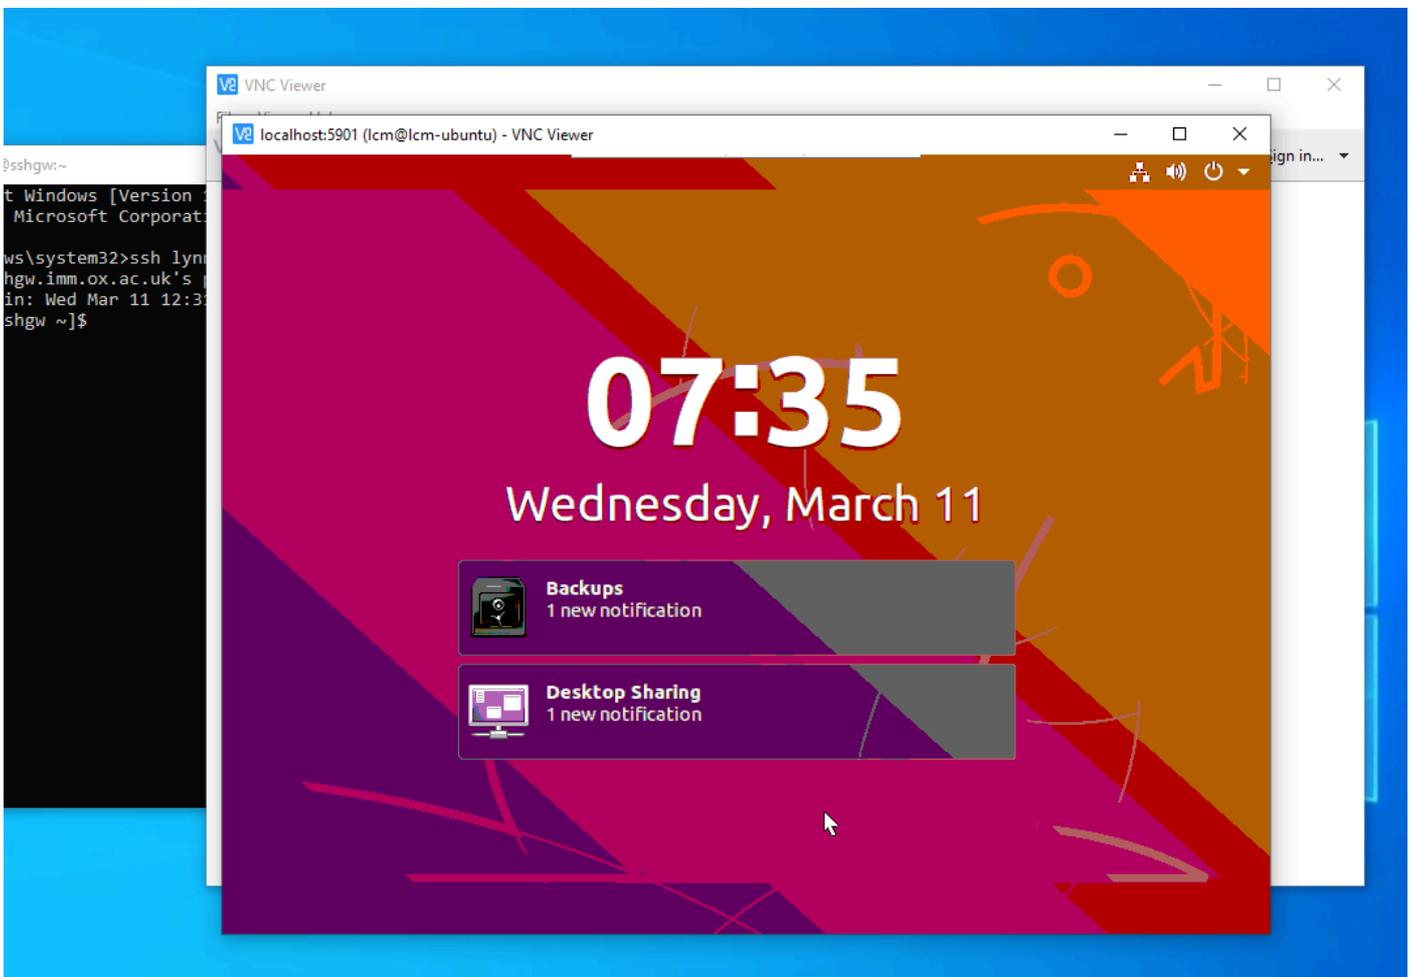

You will then see a prompt for the Ubuntu Screen Sharing password

This is the password you configured on the Institute Ubuntu desktop window below (this password may be different from the one you use to log into the user account on the machine):

Enter the password to display your Ubuntu desktop on your Windows PC:

When you have finished your remote session to your Institute desktop it is essential that you exit the ssh gateway by typing exit:

```
Last login: Wed Mar 11 11:52:29 on ttys000
[lmmproeth0:~ lcm$ ssh lynne@sshgw.imm.ox.ac.uk -L 5901:129.67.56.124:5900
[lynne@sshgw.imm.ox.ac.uk's password:
Last login: Wed Mar 11 14:42:55 2020 from lmmproeth0.imm.ox.ac.uk
[[lynne@sshgw ~]$ exit
logout
Connection to sshgw.imm.ox.ac.uk closed.
lmmproeth0:~ lcm$ █
```

On your home Macintosh Desktop

On your home Wifi you will need to use Oxford University VPN connection:

<https://help.it.ox.ac.uk/network/vpn/index>

Open a terminal window:

```
ssh SSO_username@sshgw.imm.ox.ac.uk -L 5901:IP_Address_of_Ubuntu_Desktop:5900
```

Open screen sharing application on the Macintosh

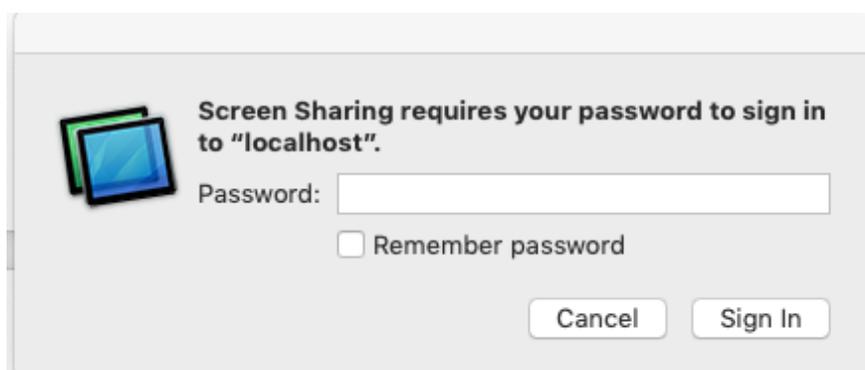

Macintosh HD > Library > CoreServices > Applications > Screen Sharing

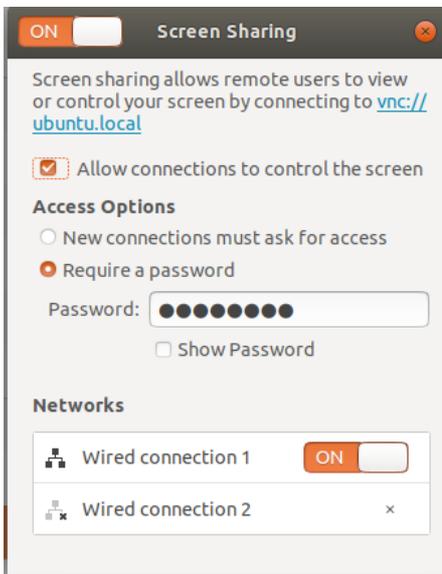

Enter

localhost:5901

You will then be prompted for the Ubuntu Screen Sharing password:

This is the password you configured on the Institute Ubuntu desktop window below (this password may be different from the one you use to log into the user account on the machine):

The Ubuntu desktop will then be displayed on your Macintosh desktop.

When you have finished your remote session to your Institute desktop it is essential that you exit the ssh gateway by typing exit:

```
lcm — lynne@sshgw:~ — -bash — 155x24
Last login: Wed Mar 11 11:52:29 on ttys000
[lmmpoeth0:~ lcm$ ssh lynne@sshgw.imm.ox.ac.uk -L 5901:129.67.56.124:5900
[lynne@sshgw.imm.ox.ac.uk's password:
Last login: Wed Mar 11 14:42:55 2020 from lmmpoeth0.imm.ox.ac.uk
[[lynne@sshgw ~]$ exit
logout
Connection to sshgw.imm.ox.ac.uk closed.
lmmpoeth0:~ lcm$
```
